Hiring Team

Hatch

Water Business Unit - Construction Services

Mississauga, ON

**Re: Construction Coordinator Technologist Co-op - Winter 2027
Requisition 101254**

Dear Hiring Team,

I am applying for Hatch's Construction Coordinator Technologist Co-op in the Water Business Unit for Winter 2027 (Requisition 101254). I am pursuing a B.Eng. in Structural Engineering at Toronto Metropolitan University, with graduation expected in 2029. Based in Mississauga, I am interested in connecting my academic work in hydraulics, surveying, and materials testing with the practical coordination needed to deliver water infrastructure. Hatch's focus on safe, sustainable solutions and its combination of office and construction-site work make this opportunity especially appealing.

My projects have taught me to check engineering work against measured results and pay close attention to discrepancies. In topographic surveying, I collected total-station measurements with a 0.0032 m benchmark misclosure and validated accuracy through closure and leveling checks. In structural mechanics, I produced AutoCAD drawings and compared hand and Excel calculations with instrument readings. My hydraulics work included EPANET water network scenarios and HEC-RAS flood-profile comparisons through the 100-year event. These experiences provide a foundation for supporting field checks, understanding technical drawings, and investigating site questions under the guidance of experienced engineers.

As a construction team member on TMU's Concrete Canoe Team, I fabricate components, test materials and methods, and document prototype results to support design improvements. I also supervise 2-6 employees at Groupe Adonis, where I coordinate daily tasks, train new hires, and resolve operational issues. Together, these roles have strengthened the organization, communication, and follow-through I would bring to tracking construction documents and coordinating between project participants.

I would welcome the opportunity to learn Hatch's processes for submittals, shop drawings, Requests for Information, quantity takeoffs, and punch lists. I would approach site work with attention to safety requirements, careful documentation, and a willingness to ask questions and act on feedback. My Dean's List recognition and continued involvement in the Concrete Canoe Team reflect the academic commitment and extracurricular participation described in your posting. Thank you for considering my application; I would appreciate the opportunity to discuss how I can contribute to your construction services team.

Sincerely,

Yousif Shasha
